ABSTRACT

Guiding principles for using sliding fee scales are presented in this paper in an effort to help states plan new child care initiatives, coordinate or strengthen existing programs, and improve sliding fee scales for current programs. Introductory comments urge states to adopt a single sliding fee scale for all their child care programs. The report then discusses the benefits of good sliding fee scales for children, parents, providers, and states. The Children's Defense Fund (CDF) model for sliding scales is discussed next. This model calls for: (1) fully subsidized care, with no copayment, for families with incomes less than 34% of the state median income (SMI) whenever possible; (2) the gradual increase of copayments from 0% to 8.2% of income for families with incomes between 34% and 75% of SMI with only 1 child in care; (3) the increase of copayments by 25% for families with 2 or more children in care, with copayments gradually rising from 0 to 10.3% of income for families with incomes between 34% and 75% of SMI; (4) gradual increases in the copayment as income rises; and (5) the creation of a sliding scale for families with school-age children in part-time care. Guidelines for determining family size and income, certifying eligibility and copayments, and family income reporting are presented. The final section discusses questions related to fee exemptions for poor families, the income level at which parents should absorb full child care costs, and guidelines for children in protective services. The bulk of the report consists of charts showing family copayments under the CDF model, depending on income, family size, and state of residence. (AC)

Appendix A - Reading the CDF Scale and Examples of State Models 21

Introduction

This paper grew out of CDF's research on state implementation of Transitional Child Care (TCC) programs authorized under the Family Support Act of 1988. On April 1, 1990, when TCC funds became available from the federal government, all states were mandated by law to establish sliding fee scales based on a family's ability to pay. Although some effective scales were developed, a review of state TCC plans by CDF revealed that many states had utilized new or existing sliding fee scales that were unrealistic or unfair. In many instances these scales were developed as a way of rationing child care dollars rather than a reflection of what fee was realistically within a family's means. The potential inequities and barriers to child care assistance implicit in many of the scales prompted a more detailed examination of sliding fee scales by CDF and resulted in the recommendations contained in this report.

Fair and efficient sliding fee scales are terribly important to children, parents, providers, and state administrators. But developing such a scale often is quite difficult because a good sliding fee scale must balance competing and sometimes conflicting policy goals. Therefore, CDF set out to develop a model scale that could be adopted by individual states or used as a guide for improvements in their existing sliding fee scales.

CDF strongly encourages states to adopt for all of its child care programs, to the extent feasible, a single sliding fee scale that is simple, reasonable and equitable. States may find this model particularly timely in light of the many changes in state administered child care programs stemming from the new federal child care legislation, including both the Child Care and Development Block Grant (CCDBG) and the "At-Risk" child care program. **However, no state should undertake a new child care sliding fee scale without thoroughly analyzing its impact on families currently receiving or potentially eligible for child care, as well as providers. We believe the model which we have developed is generally applicable to most states, but may need to be adjusted in states with very high or very low median incomes or states which have current fee scales with substantially different co-payment requirements.** In some cases, the scale may need to be adjusted to address more local concerns and priorities. CDF is willing to work with states around adjusting this model to local and state circumstances. We urge states not to develop the CDF model prior to extensive analysis, feedback and discussion.

We hope the guiding principles and background data presented in this paper will prove useful as states plan new child care initiatives, seek to coordinate or strengthen existing programs, or simply seek to improve sliding fee scales used within current state programs.

THE IMPORTANCE OF GOOD SLIDING FEE SCALES

Good child care sliding fee scales are important for a host of reasons. They play a major role in determining whether low-income families can gain access to adequate child care assistance and thereby take steps toward economic self-sufficiency. They also can help to empower parents to make choices as effective consumers of child care services, and stretch scarce child care funds to reach as many needy families as possible.

A good sliding fee scale is important to **children** because it increases the likelihood that they will be able to remain in stable child care arrangements. When unreasonable co-payments or tuition requirements force parents to remove children from their current child care programs, continuity of care is disrupted, children are placed in the care of unfamiliar caregivers, and established relationships with adults and peers are left behind.

A good sliding fee scale is important to **parents** because it ensures that the cost of child care remains within their ability to pay. The fair and predictable adjustment of the child care subsidy under a good sliding fee scale also gives parents an essential element of security when their income or employment status changes.

A good sliding fee scale is important to **providers** because it assures that parents can afford the established fee, that providers can depend on that fee as part of a stable funding base for their program, and so that providers may continue to serve the same children.

A good sliding fee scale is important to the **state** because it supports the work efforts of parents and preserves incentives to seek increased earnings through work. It also can provide the basis for relatively accurate projections of income for the program and enables the state to extend child care help to more families in need of such assistance.

SUMMARY OF GENERAL PRINCIPLES

Designing the Scale

- The parent contribution to child care costs, or co-payment, should reflect a family's ability to pay and be directly related to income and family size.
- The size of co-payments should not increase dramatically if a family has more than one child in care.
- Co-payments should not be based on the type or cost of full-time child care chosen by families.
- Co-payments for part-time care of school-age children should be substantially less than that for full-time care.
- Sliding fee scales should be based on definitions of income and family size that promote equitable treatment of families and avoid burdensome documentation or verification requirements.
- Sliding fee scales should be based on income categories and reporting periods that are broad enough to avoid the need for constant recalculation of co-payments.
- Co-payments should never exceed the "full reimbursement" rate paid by the state or county.

Implementing the Scale

- A single sliding fee scale, to the extent feasible, should be used for all state-administered child care programs.
- The co-payment expected of parents should be clearly articulated so that parents, administrators, and providers can understand how the fee was derived and under what circumstances it will change.
- States should establish clear and uniform fee collection policies.
- Receipts should be given to parents for co-payments.
- States should establish an appeals process which allows a parent(s) an opportunity to have a disputed fee or payment schedule reviewed.
- State agencies should provide training and written instructions to all those involved in establishing and collecting fees.
- States should develop data collection mechanisms to allow for accurate projected income from parent fees.
- States should plan for annual review of their sliding fee scales and adjust as necessary.

GENERAL PRINCIPLES TO GUIDE DEVELOPMENT OF SLIDING FEE SCALES

Designing the Scale

- **The parent contribution to child care costs, or co-payment, should reflect a family's ability to pay and be directly related to income and family size.**

Co-payments should be limited to a reasonable percentage of income so that families can afford to participate in subsidized child care programs. States currently use sliding fee scales that in some instances reach far beyond the ability of families to contribute to the cost of child care. For example, as of April 1, 1990, one state required a single parent with two children in child care to pay as much as 27 percent of his/her gross income towards child care under its TCC program.

- **The size of co-payments should not increase dramatically if a family has more than one child in care.**

Any sliding fee scale based on a family's ability to pay by definition should treat families of the same size and income level similarly. For this reason, co-payments should not double or triple when families have more than one child in care. More modest increases in co-payments may be appropriate to reflect the additional benefits received by the family and the small savings that accrue to the family by having the additional child in care (e.g., the cost of daily snacks or meals). Census Bureau data indicate that families of all incomes with more than one child do expend slightly more on child care.

- **Co-payments should not be based on the type or cost of full-time child care chosen by families.**

Some states currently require parents to contribute a fixed percentage of the cost of care, rather than of their income, as their co-payment. This approach penalizes families for choosing higher quality care which may be more costly and encourages parents to select poorer quality or even dangerous child care arrangements. Similarly, states that impose higher co-payment requirements for center-based care rather than informal or family day care discourage parents from choosing center-based care. These policies effectively restrict parent choice, failing to ensure that a parent's desired child care arrangements will remain within the family's ability to pay.

- **Co-payments for part-time care of school-age children should be substantially less than that for full-time care.**

While co-payments should not normally vary among different types of full or part-time care, there are important reasons to establish lower fees for parents who have school-age children in part-time (before- and/or after-school) programs. Many parents may be discouraged from enrolling their children in part-time school age programs if co-payments are calculated on the same

basis as full-time care for younger children. For this reason, states should establish a substantially lower fee for part-time care of school-age children.

- **Sliding fee scales should be based on definitions of income and family size that promote equitable treatment of families and avoid burdensome documentation or verification requirements.**

Fee scales should use a simple measure of income that does not require excessive client documentation. Burdensome documentation requirements mean that assistance may be delayed or denied for reasons unrelated to a family's need, while at the same time burdening child care administrators with excessive paperwork. For this reason, many states have chosen to base their sliding fee scales on gross income or a similarly straightforward measure of income.

Some states attempt to calculate net income or adjust family income to account for assets or special circumstances such as catastrophic medical bills. Although in some cases this approach may appear to be more supportive to families, it also can have considerable drawbacks. Ensuring consistent and equitable treatment of families in calculating net income can be extremely difficult, particularly when some families pay for health insurance or other expenses through payroll deductions while others do so directly. The additional documentation required for consideration of assets or medical bills may complicate greatly determinations of eligibility and appropriate co-payments, delaying or denying access to child care and creating further inequities for families who cannot meet these requirements.

- **Sliding fee scales should be based on income categories and reporting periods that are broad enough to avoid the need for constant recalculation of co-payments.**

States should choose a reasonable interval for the reporting of family income (e.g., every six months) so that families and administrators are not engaged in constant recalculation of incomes and co-payments. Low-income working families are more likely to be paid on an hourly basis, resulting in earnings that vary from week to week. Policies that require redetermination of co-payments every time there is a slight change in income creates a bureaucratic nightmare for parents and administrators while failing to enhance significantly the equitable treatment of families receiving child care assistance.

However, states will want to identify and make adjustments for significant interim changes in income. States may wish to require that families make interim reports if income changes more than $100 per monthly (excluding variation of number of workdays in a given month.)

- **Co-payments should never exceed the "full reimbursement" rate paid by the state or county.**

In some states, the "full reimbursement" rates (the total of the established co-payment by a family plus the amount paid by the state or county) are very low, and if co-payments are not in proportion to the full reimbursement rate, income eligibility may actually be lower than that initially established. In those states where full reimbursement rates are extremely low, states should adjust their co-payments so that families are still eligible for subsidy up to 75 percent of state median income or up to whatever level the state has established.

Implementing the Scale

- **A single sliding fee scale, to the extent feasible, should be used for all state-administered child care programs.**

A universal sliding fee scale facilitates a family's transfer from one program to another and supports the continuity of care provided to families. In some cases, states may be forced to make changes for some groups of families (e.g., poor families receiving assistance under federal TCC or the "At-Risk" programs must be charged a token fee while other poor families may be exempted from any co-payment requirement). However, even in those cases where the state decides that a "seamless" or universal system may not be in the best interest of all families, the state should ensure that the differences in co-payments are small in order to minimize barriers that families confront as they move from one source of subsidy to another.

The complexity of multiple scales, in addition to making it extremely difficult for administrators and providers, also contributes to greater error rates.

- **The co-payment expected of parents should be clearly articulated in so that parents, administrators, and providers can understand how the fee was derived and under what circumstances it will change.**

The fee schedule itself should be simple and easy to review. Multiple sliding fee scales based on various funding streams tend to confuse parents and may intimidate them from participating in the program. Since one of the purposes of subsidized child care is to help families move to economic self-sufficiency, the state should make it clear to parents through the scale itself that it will support them in this endeavor.

- **States should establish clear and uniform fee collection policies.**

It is crucial that it be clear to parents and providers when fees are due and when they are considered delinquent. In almost all states, co-payments are made directly to providers. States should clearly define whether or not parents or the state or both

pay fees for holidays, sick days, and other absences. Providers will tend to support and be more willing to participate in a system with a fee policy that provides them a greater level of security and protection from loss. An efficient and reliable sliding fee scale system thus is essential in order to maintain an ample supply of providers. 1/

- **Receipts should be given to parents for co-payments.**

Receipts for co-payments are essential to enable parents to resolve discrepancies over payment of fees and document child care costs incurred for purposes of claiming federal or state tax credits. States also should help parents become aware and take advantage of tax credits, including the federal Child and Dependent Care Tax Credit and the Earned Income Credit as well as similar state tax credits for which they may be eligible. Public education efforts, either directly or through child care providers and resource and referral agencies, can be effective ways of increasing parents' use of tax credits that help offset their child care costs.2/

- **States should establish an appeals process which allows a parent(s) an opportunity to have a disputed fee or payment schedule reviewed.**

There is nothing specific in the CC&DBG which specifically mandates an appeals process. However, TCC does require a resolution process before benefits can be reduced. It is likely that a court would rule that some form of dispute resolution needs to be established for all programs and that due process considerations dictate an appeals procedure. A review process is always important both to promote equitable treatment and to help identify policies that need further review or reconsideration.

- **State agencies should provide training and written instructions to all those involved in establishing and collecting fees.**

In order to ensure that families are treated equitably in all state-administered child care programs, states should develop plans for training and technical assistance. States certainly should train their own staff, providers, and resource and referral agencies, but other social service providers or legal assistance workers also may benefit from such training. Written instructions, including a sample work sheet or form for determining a family's co-payment may be essential to ensure that all parents and providers are given the same information. These training and information dissemination efforts should be launched prior to implementation of any new sliding fee scale.

- **States should develop data collection mechanisms to allow for accurate projected income from parent fees.**

Fee collections are difficult to estimate until a state is able to develop reliable information on co-payments by a particular target population. It is crucial, however, that

states begin to collect this information systematically if they have not done so previously. States with current data on co-payments will be able to make accurate projections of future costs or revenues when they convert to a new sliding fee scale. Accurate projections of fee collections also will allow states to offer stable subsidies to more low-income families.

- **States should plan for annual review of their sliding fee scales and adjust as necessary.**

Annually, the data on federal poverty levels and state median income is published, and it usually changes. Periodically, data on child care expenditures may become available. States need to be current on this information and regularly review their own sliding fee scales to either update them or to at least be accurate in their presentation of what their scales actually reflect.

SIX STEPS TO THE DEVELOPMENT OF THE CDF MODEL SLIDING FEE SCALE

STEP ONE: Provide fully subsidized care, with no co-payment, for families with incomes less than 34 percent of the state median income (SMI) whenever possible.

Because poor families by definition have too little income to meet their most basic needs, they should not be expected to contribute to the cost of child care. There is no state-by-state measure of poverty that captures variations in living costs and median incomes across regions. But for most states, 34 percent of SMI provides a reasonable and readily available alternative for determining the point at which families should begin to make co-payments. 3/

Under current federal regulations, states are required to establish at least token co-payments for all families participating in the TCC and "At-Risk" programs under Title IV-A of the Social Security Act, including those with incomes below 34 percent of SMI. (This requirement for the "At-Risk" program is contained in proposed regulations not yet made final by HHS.) However, these co-payments can be set at very low levels (e.g., $0.10 per day) so that they do not place substantial new financial burdens on poor families. States are not required to impose co-payments on low-income families who receive assistance under other federal or state child care programs. (For further discussion of token fees, see "Tough Questions for States to Consider.")

STEP TWO: Raise co-payments gradually from 0 to 8.2 percent of income for families with incomes between 34 and 75 percent of SMI and only one child in care.

It is important for co-payments to rise gradually as family income grows to avoid unrealistic increases in fees and preserve incentives for additional work effort by parents. The top of the sliding fee scale--75 percent of SMI--reflects the maximum income level at which families are eligible for assistance under the federal Child Care and Development Block Grant. However, states could extend their scale up to 100 percent of SMI by utilizing other funds for this purpose.

A maximum co-payment of 8.2 percent of income would be imposed on families with incomes equal to 75 percent of SMI and only one child in child care. This maximum payment level reflects the average child care expenditures of moderate-income families nationally based on data from the U.S. Census Bureau. 3/

STEP THREE: Increase co-payments by one-fourth for families with two or more children in care, with co-payments gradually rising from 0 to 10.3 percent of income for families with incomes between 34 and 75 percent of SMI.

Families with two or more children in care typically cannot afford co-payments that are twice as large as those imposed on families with one child in care. But it is reasonable to expect such families to make some additional contribution to the cost of care for their children. National data on child care expenditures by families at all income levels suggest that families with two or more children spend roughly 25 percent more of their income on child care than those with only one child. 4/

STEP FOUR: Measure gross monthly income in increments of $100.00 and gradually increase the co-payment as income rises. Multiply the midpoint of each income range by a gradually increasing percentage of income to be paid by the family, and establish a preliminary monthly co-payment for each income group.

Rather than basing co-payments on a precise percentage of income and thereby requiring constant recalculation of co-payments as income fluctuates, intervals of $100 per month seem to provide a reasonable threshold for deciding when changes in income are significant enough to trigger an increase or decrease in co-payments.

STEP FIVE: Create a sliding fee scale for families with school-age children in part-time care, with co-payments equal to half the amount required for full-time care.

Families with school-age children may be discouraged from securing appropriate part-time care (before and/or after school) if they are expected to make the same co-payments as those with younger children in full-time care. The lower cost of part-time care also suggests that smaller co-payments are appropriate in these circumstances. Separate sliding fee scales for families with school-age children in part-time care are not included in this report, but can be constructed simply by dividing the required co-payment at each income level by two, as the scale for preschool-age children is based on 40+ hours a week (full-time care).

In order to qualify for a reduced co-payment, an eligible family should be required to meet two conditions: the children on whose behalf assistance in requested must be of school age, and they must be in care for 20 hours or less per week. Families that meet only one of these two conditions (including those with school-age children in full-time care during summer months) would not qualify for the reduced co-payment. Families that have one child in part-time care and another in full-time care would be charged the co-payment for two children in full-time care, since the 25 percent increase in co-payment is unlikely to deter a family from using part-time school-age care.

STEP SIX: Round totals to the nearest nickel and establish daily, weekly, and monthly co-payments.

The preliminary monthly co-payment (previously established in Step Four) is divided by 21 days to obtain a daily co-payment fee. For obvious administrative and practical reasons, this number is rounded to the nearest nickel. The rounded figure then is multiplied by five to calculate a weekly rate, and by 21 to arrive at an average monthly rate for co-payment fees. The monthly rate is recalculated from its original preliminary figure so as to be coordinated with the two other rates. 6/

USING THE CDF SLIDING FEE SCALE

STEP ONE: Determine family size by counting the child on whose behalf assistance is requested, all siblings, the primary caretaker and any other adults in the household who have a legal obligation to support the child.

In calculating family size, all children on whose behalf assistance is requested, as well as all other siblings, should be included. The primary caretaker relative, and the caretaker relative's spouse, unless that spouse does not have a legal responsibility to support the children on whose behalf assistance is requested, also should be counted as part of the family.

Half-siblings or step-siblings should not be counted in determinations of family size unless assistance is requested on their behalf. If assistance is requested on behalf of a half-sibling or step-sibling, the parent living with that child also should be considered part of the family unit.

If assistance is requested on behalf of both a caretaker's natural children and a foster child, the child in foster care should be considered as a separate family of one. (For further discussion of children in foster care, see "Tough Questions for States to Consider.")

STEP TWO: Determine family income by counting gross income of the primary caretaker and any other adults who have a legal obligation to support the child on whose behalf assistance is requested.

In calculating household income, the worker shall consider gross income. The worker shall deduct actual payments made for child support for a child not living in the household.

Countable income includes all income of a child on whose behalf child care assistance is requested, as well as the income of any adult residing with the child who has a legal obligation to support the child. In counting income for a foster child, the only income that should be counted is the amount of money the foster parent receives for foster care for that specific child. In most states, countable income should not include stepparent income, because stepparents do not have a legal obligation to support a child. However, if the family chooses to apply for assistance for both children and their step-siblings or half-siblings, then the income of the stepparent living with the household should count as household income.

Countable income does <u>not</u> include income of children residing in the household who are not requesting child care assistance, unless those children are legally required to support a child on whose behalf assistance is requested.2/

STEP THREE: Certify eligibility and co-payment at least once a year, but no more frequently than every six months unless circumstances necessitate more frequent changes.

To simplify the calculation process and to avoid burdening either the worker or the family, each family's eligibility and co-payment should be redetermined at least once a year, but no more frequently than every six months unless requested by a parent. During this certification period, families should be required to report changes in family composition (e.g., a child whose needs are taken into account is no longer in the household) and major changes in family income.

STEP FOUR: Require families to report income changes during the certification period if they are equal to or greater than $100 per month.

By measuring family income only in increments of $100 per month, administrative burdens for families, providers, and state administrators are reduced. These increments also enhance the financial incentives for greater work effort by allowing families to keep all of their additional earnings (up to $100 per month) until the co-payment is redetermined at the end of the certification period. A parent should be allowed to request a redetermination of the co-payment at any time in the event of a drop in family income, regardless of the amount of loss or length of time since the previous certification.

TOUGH QUESTIONS FOR STATES TO CONSIDER

o The interim final regulations for the CC&DBG permit states to waive co-payments for families with incomes below the federal poverty level. In contrast, under final regulations for TCC and proposed regulations for the "At Risk" program, all families are required to pay a fee. How can we develop a single sliding fee scale if we want to exempt poor families from paying fees?

Unfortunately, current federal regulations preclude states from developing a single sliding fee scale that waives co-payments for families with incomes below the federal poverty level. On the one hand, the Child Care and Development Block Grant requires that states give priority to the lowest income families, and the interim final regulations for CC&DBG reiterate the state's option of waiving fees for poor families. On the other hand, final regulations for TCC and proposed regulations for the "At Risk" program do not permit states to exempt families below the federal poverty level from paying fees.

Faced with these contradictory regulations for different groups of families, CDF recommends that states use substantially the same sliding fee scale for all state-administered programs, altered only by the addition of a token fee for TCC and "At Risk" families below the federal poverty level. While any token fee will place some burden on poor families and cost more to collect than what a provider will actually receive, these burdens and costs can be minimized by collecting the fee in advance on a quarterly basis. Because families at or below the federal poverty line simply do not have income to spare, they should be exempted from the co-payment requirement in all other state-administered programs.

If states are so committed to the use of a single scale that they choose not to waive co-payments for families whose income is below the federal poverty level, then an alternative would be to set a token fee for all poor families except for those on AFDC. 8/

There are both pros and cons to having parents pay token fees:

PROS	CONS
o Low-income families will feel more like other consumers or more "empowered" by paying a fee.	o Low-income families cannot realistically afford to pay anything for child care.
o Families will learn to budget for child care expenditures.	o If the fee is as low as $1.00 or $2.00 a month, which they may be able to afford, it costs more to collect than is actually collected. (In many cases, providers won't bother to collect it at all.)
	o Since collecting fees from families below the federal poverty level contradicts the principle that co-payments should be based on a family's ability to pay, it is senseless to adopt a principle of mandating all families to pay even a small fee if they cannot afford it.

On balance, the disadvantages of token fees seem to outweigh any benefits they might yield. Nonetheless, unless and until current and proposed federal requirements for the TCC and "At Risk" programs are changed, states will have no choice but to collect such fees for at least some poor families.

o At what income level should a state require a family to absorb the full cost of child, and is there a "cliff effect" which arises?

In most states, there are not sufficient federal or state dollars to serve all those families who need child care subsidy. Since the CC&DBG places highest priority on assistance to the lowest-income families, states must decide how far to extend income eligibility and where to focus subsidy support.

In making these decisions, states face an inherent dilemma. If the sliding fee scale is not gradual enough, co-payments can become a disincentive to increased work effort and higher earnings. However, a huge jump in child care costs at the point where families become ineligible for state subsidy also may be counterproductive.

CDF's model scale places highest priority on ensuring the affordability of care for the lowest income families, thereby avoiding an "internal cliff." (This term represents the major

jumps in costs to the family when moving within income eligibility levels for subsidy.) Yet this emphasis on small gradual increases in co-payments in the CDF model sliding fee scale creates the potential for a major jump in day care costs for families with incomes higher than 75 percent of state median income (SMI), or an "external cliff." (This term represents the major jump in the cost of care to the family when a family's income rises to a level that makes them ineligible for subsidy, and the family must begin to pay the private market rate for child care.)

The Child Care and Development Block Grant, unlike other federal child care programs, limits income eligibility for federal reimbursement to families to 75 percent of SMI. In many states, however, families will find it difficult to pay for the full cost of child care even at this income level. Such families are most likely to be confronted with an "external cliff." The only way to avoid such a result in many states will be to use other federal or state resources to assist families with incomes above 75 percent of SMI.

Of course, a state can elect to use federal Title XX/Social Service Block Grant funding or state dollars for child care assistance to families with incomes exceeding 75 percent of SMI. To stretch these funds, states also can consider developing public-private partnerships whereby the state would set aside some state or SSBG dollars for the specific purpose of leveraging private dollars to support child care assistance to families with incomes too high to qualify for aid under the CC&DBG. Private donors (e.g., United Way, private foundations, or businesses) may then be solicited as partners in sharing the cost of providing child care to families above the income guidelines selected by the state for its regularly subsidized programs. If potential donors were reluctant to give money directly to the state for such purposes, the state could contract with a private entity such as a not-for-profit resource and referral agency to administer these public and private funds for child care.

In states that are unable to serve all low- and moderate-income families below 75 percent of SMI, the choices are more difficult and the problems of an "external cliff" more extreme. Such states may have little option but to set an initial eligibility limit substantially below 75 percent of SMI and then allow families already eligible to remain in the program until their income reaches 75 percent of SMI. Such an approach targets assistance to the lowest-income families and yet still supports their work efforts by gradually increasing their co-payments as their income rises. While this strategy may move such families in more incremental steps toward assuming the full cost of care, it still may not eliminate the "external cliff" in states with relatively high child care costs.

o How should states address income eligibility and sliding fee scales for children placed in child care as part of a protective service plan?

Forty-three states currently have no income eligibility guidelines for children in protective services and almost all states exempt these families from sliding fee scale co-payments. CDF strongly recommends states continue this policy, since child care for these families may often be the only support service available to keep children in the home.

Under the CC&DBG interim final regulations, income eligibility at 75 percent of SMI must be maintained and families above the federal poverty level have to pay a fee regardless of protective service status. (There is some optimism that this will be changed in the final regulations.) To comply with these regulations, states should use CC&DBG dollars for protective service families only if their incomes are below the federal poverty level, thereby allowing a waiver of the required co-payment. As an alternative, states could use CC&DBG for protective service families up to 75 percent of the SMI and explore the possibility of paying the required co-payment with state dollars. However, the complexity of this approach may lead states to continue to rely on the use of SSBG dollars or state dollars to serve these families. (For discussion of children in foster care, please see definition of family on p. 12).

ENDNOTES

1/ Although no federal regulation requires that the co-payment be paid directly to the provider, at this writing we know of no state that collects the co-payment directly. There are a few states which have a practice of allowing providers to keep co-payments above standardized reimbursement rates. Using co-payments to augment reimbursement rates is a practice which CDF does not recommend, as it in principle encourages providers to enroll higher income eligible families. If reimbursement rates are inadequate, then states should address this issue directly rather than indirectly by letting providers keep co-payments that are not deducted from the reimbursement rate.

2/ Administrators should be aware that the National Women's Law Center (NWLC) in collaboration with CDF, is preparing earned income credit and dependent care outreach materials targeted specifically at low-income child care consumers. For more information contact Betsy Hildebrandt at NWLC, (202) 328-5160.

3/ Data on state median incomes are published in the Federal Register (Vol. 55, April 12, 1990). Federal poverty levels are based on 1991 estimates prepared by the U.S. Department of Health and Human Services for current year use in determining eligibility for assistance under numerous federal programs, also published on an annual basis in the Federal Register. These HHS estimates are slightly different than federal poverty levels calculated by the U.S. Census Bureau for the purposes of calculating prior year poverty rates (most recently available for 1990) and are more appropriate for future use in state sliding fee scales.

The federal poverty level provides a uniform national standard by which to identify those families most in need of assistance. However, because the ceiling on eligibility for child care assistance under the Child Care and Development Block Grant is set at 75 percent of each state's median income, rather than at a fixed income level for all states, it is difficult to use the federal poverty level as the point at which families begin making co-payments. While states with relatively high median incomes could begin requiring co-payments at the federal poverty and still increase them very gradually before reaching 75 percent of SMI, poorer states with low median incomes would be forced to use greatly compressed sliding fee scales with large jumps in co-payments because the federal poverty line is much closer to 75 percent of their SMI.

Therefore, in order to develop a gradual sliding fee scale for all states, CDF chose 34 percent of SMI as a relative measure of hardship that can substitute for the federal poverty level in determining the point at which families begin making co-payments. National data reveal that the federal poverty level for a family of four in 1991 ($13,400) was equal to 34.3 percent of the median income for the nation as a whole. Preserving this relationship

between poverty and median income, the CDF model sliding fee scale requires co-payments only by families with incomes above 34 percent of SMI. The only exceptions are in those states where the federal poverty level is less than 34 percent of SMI. The interim final regulations for CC&DBG require states to charge a fee for child care for all families with incomes above the federal poverty line, even if those families have incomes below 34 percent of SMI. In such states, the CDF scale imposes a token fee of $0.25 per day for families with incomes between the federal poverty line and 34 percent of SMI.

4/ Data on national child care expenditures is from the U.S. Census Bureau's Who's Minding the Kids (Winter, 1986-87, Current Population Reports, Series P-79 #20). According to the Census Bureau, moderate-income families ($15,000-$30,000) paid an average of 9.2 percent of their income for child care in 1987. 75 percent of the national median income fell in about the middle of this income range in that year. As a result, we concluded that families should not be required to pay much more than 9.2 percent as they approach 75 percent of SMI. As discussed in the next note, we adjusted this downward (to 8.2 percent) for a family with one child and upward for a family with two or more.

5/ Data from the Census Bureau shows that families (of all incomes) with one child spent an average of 5.9 percent of their income on child care and families with two or more children spent an average of 7.4 percent of their income on child care in 1987. This 25 percent difference is incorporated into the formula by calculating two maximum rates with a 25 percent difference, one for a family with one child and one for a family with two or more children. These two figures are centered around 9.2 percent (established earlier as the average amount spent by all size families within an income bracket which corresponds to 75 percent of SMI). Consequently, as a family's income approaches 75 percent of SMI, the co-payment for a family with one child will reach a maximum of 8.2 percent of its monthly income while the co-payment for a family with two or more children in care will reach a maximum of 10.3 percent of its monthly income (which is 25 percent greater than 8.2 percent). There will be no additional charge if a family places more than two children in child care.

6/ While a weekly rate often is multiplied by 4.33 weeks to calculate a monthly rate in studies similar to this one, the 4.33 conversion would be much more restricting to both the providers and the clients. Multiplying the daily rate by 21 days offers greater flexibility in altering the set co-payment fee to calculate fees for the days in which children are enrolled during the month and to allow for state flexibility in determining whether or not a co-payment is applied to vacation days or holidays. In addition, there are an average of 21 child care service days (Monday through Friday) per month.

7/ One other possible rule for countable income would be to provide for consideration of any other income actually contributed to the support of a child, even if it is contributed

by an adult who does not have a legal obligation to support. Although this approach may help ensure that income calculations reflect actual family circumstances, it makes calculations more complex, increases the potential for error, and increases administrative burdens because of the difficulty of documenting and accurately projecting the availability of such income. If states do choose to count such income, they should do so only in those instances in which the case record documents a reasonable expectation that contributions will continue during the certification period.

8/ Families on AFDC receiving child care under the Family Support Act (for example, to enable them to participate in education or training activities), but not under the "At Risk" and TCC programs, cannot be charged a co-payment.

APPENDIX A:READING THE CDF SCALES AND EXAMPLES OF STATE MODELS

34 percent, 75 percent, and 100 percent of the state median income (SMI) as well as the federal poverty level (FPL) are marked off on each scale for each state. 1/ Part-time before and after school care rates are not shown and should be established at 50 percent of the co-payment for one child in care. (See page 10 for more information.) Token fees will need to be established for T.C.C. and "At Risk" 2/ for families below the poverty level.

1/ The State Median Income figures were taken from the Federal Register (Vol. 55 April 12, 1990). The Federal Poverty Levels are also located in the Federal Register (Vol. 56 February, 1991). In order to formulate the scales with the most recent published official data, 1991 figures are used. State Median Incomes for 1992 have been published. However, exact Federal Poverty Levels for 1992 are not available as of this writing. CDF applies the numbers provided by the Federal Register as opposed to other sources of official data because it is our sense that more federal programs tend to use the Fedral Register as their base reference when implementing administrative procedures.

2/ Department of Health and Human Services Family Support Administration, 45CFR Parts 255 and 257, AFDC At-Risk Child Care Program, Proposed Rule, Federal Register (June 25, 1991).
